Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

Aspect ratio 16:10

minimum $L (m) = (\text{diagonal screen size in inches}) \times 0.0255 - 0.0290$

maximum $L (m) = (\text{diagonal screen size in inches}) \times 0.0413 - 0.0292$

Aspect ratio 16:9

minimum $L (m) = (\text{diagonal screen size in inches}) \times 0.0262 - 0.0290$

maximum $L (m) = (\text{diagonal screen size in inches}) \times 0.0425 - 0.0292$

Aspect ratio 4:3

minimum $L (m) = (\text{diagonal screen size in inches}) \times 0.0289 - 0.0290$

maximum $L (m) = (\text{diagonal screen size in inches}) \times 0.0468 - 0.0292$

NOTE:

Distances calculated with the above equations will include a slight error.

Shift range

Optical axis shift function allows to shift the position of a projected image as shown below.

• **Floor mount**

• **Ceiling mount**

Installable angle

Install the projector at an angle within the range shown below.

• **Vertical direction**

The projector may be installed at a vertical angle of 30°.

• **Horizontal direction**

The projector may be installed at a horizontal angle of 15°.

List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 91 kHz, vertical scanning frequencies of 24 Hz to 100 Hz, and a dot clock of 162 MHz maximum can be input.

NOTE: The native resolution of this projector is 1,280 x 800 pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector while it is operating.
2. Make sure there is the unobstructed space as shown below or more around the projector's exhaust openings. In addition to this space, also ensure that there is a sufficient work space for removing and installing the lamp, filter and other parts.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.

Direction of air intake and exhaust

Operating the projector continuously

1. If the projector is to be operated continuously 12 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods (one hour or less).
